Himanshu Pal

Full-Stack Engineer · .NET / C# + React / Next.js / TypeScript

I ship multi-tenant SaaS features end to end: PostgreSQL schema → ASP.NET Core API → React UI, plus the integrations and jobs behind them.

Noida, India · Immediate joiner

415
REST endpoints in the .NET platform I build on (48 controllers)

7
integrations: AWS, Azure, GCP, GitLab, Google Workspace, Jira, Slack

4
ad networks integrated or migrated: Google, Microsoft, TikTok, Apple

1.5+
years of C# / ASP.NET Core and React / Next.js in production

SUMMARY

Full-stack engineer on a multi-tenant GRC/compliance SaaS: ASP.NET Core 6 with Clean Architecture and CQRS (MediatR) on PostgreSQL, plus a Next.js / TypeScript frontend on React Query, Zustand, and NextAuth. Earlier built the integration and ETL layer of a marketing-data platform in C#, SQL Server, Python, and Airflow. Strongest at owning a feature from migration to API to screen, modernizing third-party integrations, and keeping scheduled jobs and heavy list endpoints reliable.

EXPERIENCE

Software Engineer (Full-Stack) — Thinksys Software Pvt. Ltd., Noida

Feb 2025 – Present

Compliance & Trust Platform (GRC SaaS) *.NET 6 · EF Core · MediatR · PostgreSQL · Hangfire · Redis · Next.js · React · TypeScript*

- Contribute across a 48-controller / 415-endpoint API with 399 MediatR handlers, 162 entities, and 173 FluentMigrator migrations serving ISO 27001 and NIST workflows (frameworks, controls, evidence, risk register, policies, audits).
- Built the **Trust Center** module end to end (~4.5k lines): public trust page on a dynamic Next.js route, publish/preview workflow, certificate CRUD, and a **Request Manager** for admins to review and approve document-access requests from external visitors.
- Designed its frontend data layer: typed API client, TanStack React Query for server state, Zustand for UI state, React Hook Form validation, NextAuth route protection in Next.js middleware, plus shared **packages/ui** filter components.
- Work in the backend CQRS pipeline: command/query handlers, EF Core + migrations, 9 Hangfire recurring jobs (daily AWS/Azure/GCP evidence syncs, notifications, link-health reports), Serilog logging, health checks, and Redis caching on heavy list/filter endpoints.

Marketing Data Platform (ad-network integrations & ETL) *C# · ASP.NET Core · SQL Server · Python · Airflow · Redshift*

- Migrated the Microsoft Ads integration from legacy SOAP/WSDL clients to the REST API with OAuth 2.0, removing generated proxy code.
- Hardened Google Ads sync with retry/backoff, rate-limit handling, and structured exception reporting so failed batches retried instead of silently dropping.
- Re-modeled TikTok Ads ingestion for Smart Campaigns: new campaign schema, backfill, and updated reporting queries without breaking existing dashboards.
- Built the Apple Ads reporting pipeline end to end: API client, transformation layer, SQL Server stored procedures, scheduled delivery to dashboards.
- Replaced manual exports with Python Airflow DAGs syncing SQL Server tables to Amazon Redshift daily for the analytics team.

SELECTED PROJECTS

OrderFlow — event-driven commerce backend *.NET 8 · MassTransit/RabbitMQ · PostgreSQL · Redis · OpenTelemetry · Next.js*

Why: the hard parts of distributed systems that CRUD portfolios skip: exactly-once effects, compensation, observability.

- Order → payment → inventory as a MassTransit saga with transactional outbox, idempotent consumers, and dead-letter replay.
- OpenTelemetry traces and metrics into Grafana; k6 load script documents throughput and p95 latency in the README.
- Next.js admin showing each order's event timeline and saga state from a read model projected off the event stream.

DocMind — AI document intelligence *.NET 8 Web API · Python worker · PostgreSQL + pgvector · OpenAI API · Next.js · SSE*

Why: production-style LLM integration with measurable accuracy, not a chat demo.

- Chunks and embeds invoices/contracts, then extracts structured fields validated against a JSON Schema before persisting.
- Hybrid retrieval (PostgreSQL full-text + pgvector) streamed over SSE to a React chat UI, with per-tenant auth and audit log.
- Eval harness scores extraction accuracy on a labelled fixture set on every change, so prompt edits are measured, not guessed.

SKILLS

Languages	C#, TypeScript, JavaScript (ES6+), SQL, Python
Backend (.NET)	ASP.NET Core 6/8 Web API, REST design, MediatR (CQRS), Entity Framework Core, LINQ, AutoMapper, Dependency Injection, Middleware, FluentMigrator, Swagger/OpenAPI, Health Checks, xUnit
Frontend (JS/TS)	React 18, Next.js (Pages Router, dynamic routes, middleware), TanStack React Query, Zustand, React Hook Form, NextAuth, Jest, React Testing Library, ESLint/Prettier, pnpm + Turborepo
Data & Caching	PostgreSQL (schema design, indexing, query tuning, Npgsql, pgvector), SQL Server (T-SQL, stored procedures), Amazon Redshift, Redis
Integrations & Jobs	OAuth 2.0 / JWT, REST and SOAP clients, AWS / Azure / GCP / GitLab / Google Workspace APIs, Hangfire, Apache Airflow, RabbitMQ, webhooks, retry/backoff
DevOps & Quality	Docker, Docker Compose, Git, GitLab CI/CD, Serilog, OpenTelemetry, Postman, code review

EDUCATION

B.Tech, Computer Science — ABESIT Institute of Technology (AKTU), Ghaziabad 2021 – 2025
